

## Stage 2: Steam oxidation and hydrogen production.

Oxidation of the  $\text{RGH}_2$  oxygen-carrier with steam generated from heat produced by the  $\text{RGH}_2$  process.

Biogas / Landfill gas feed Stream	H <sub>2</sub> Mol%	H <sub>2</sub> O Mol%	Temp °C	Key reactions in the $\text{RGH}_2$ plug-flow, iron-oxide chemical looping reactor  $6\text{Fe} + 6\text{H}_2\text{O} \leftrightarrow 6\text{FeO} + 6\text{H}_2$ $6\text{FeO} + 6\text{H}_2\text{O} \leftrightarrow 6\text{Fe}_3\text{O}_4 + 2\text{H}_2$	BFG / BOFG Feed Stream	H <sub>2</sub> Mol%	H <sub>2</sub> O Mol%	Temp °C
A: Steam to $\text{RGH}_2$	0	100	185		A: Steam to $\text{RGH}_2$	0	100	150
B: H <sub>2</sub> and steam to heat recovery	44	56	806		B: H <sub>2</sub> and steam to heat recovery	43	57	737
C: H <sub>2</sub> to utilisation or dryer	96	4	Ambient		C: H <sub>2</sub> to utilisation or dryer	96	4	Ambient
D: High purity, dry H <sub>2</sub> product	99.99	Trace	Ambient		D: High purity, dry H <sub>2</sub> product	99.99	Trace	Ambient
